This is a course in Macroeconomic Theory. The prerequisites are introductory micro- and macro-economics (Econ 101 and 102). The objective of this course is to develop a set of tools useful for understanding national economic growth, business cycles, inflation, and other macroeconomic phenomena.

The text will be Mankiw, *Macroeconomics*, Sixth Edition. We will also read William Greider’s *Secrets of the Temple* (part one) and William Easterly’s book *The Elusive Quest for Growth*. These books are available at the College store. I will also post news articles and other readings on my web page or on Blackboard.

Grades will be assigned as follows:

- Final exam: Friday, Dec 15, 7:00 pm. 35% of grade.
- Midterm I: Friday, Sept 29 in class, with take home part due Wednesday, Sept 27 in class. 27.5% of grade.
- Midterm II: Wednesday, Nov 8 in class, with take home part due Monday, Nov 6 in class. 27.5% of grade.
- Class participation. 10% of grade.

Each midterm exam will have a short computer based take home component, which will be due in class prior to the in-class exam date. Your ability to take the scheduled midterm and final examinations at the times posted on this syllabus is a requirement for enrollment in this course. If you anticipate a legitimate scheduling conflict, you must see me within the first two weeks of class to have the conflict resolved. Otherwise, no exceptions will be granted. Late take home exams will not be accepted and will receive a grade of zero. You may not work together on the take home portion of the exams. All graded work is covered by the Honor Code.

I will distribute problem sets and provide (some) suggested answers (with a lag). These homeworks are *ungraded*, but it is extremely important that you keep up with them.

On the take home parts of the exams and on some of the problem sets, you will be asked to use the spread sheet program Excel to analyze historical data. Excel is available in the KJ-220 and KJ-225 labs, and the data files can be downloaded from my web page or from Blackboard.

Each student will be asked to give at least one short presentation during the semester on a current macroeconomic event or other issue of relevance to the class. See below for details.

I strongly encourage you to meet with me regularly to discuss the readings, lectures, and problem sets. If you can’t make my scheduled office hours, I am very happy to meet with you by appointment.

The course divides naturally into three sections. The first third of the course models the economy in the long run. Here, we consider the determinants of national economic growth, inflation, and the composition of national output, abstracting away from short run business cycle fluctuations. The two central models that we will study in this section are a long run model of saving and investment and the Solow growth model.

The second third of the course looks at business cycle fluctuations and macroeconomic stabilization policy. Here, we study a simple model of national income determination in the short run (the IS-LM model) and a simple model of inflation which will help us shed some light on events such as the
Great Depression and the recession of 1990-1991 as well as on the current state of the economy. We will also consider some alternative models and some debates about how monetary policy should be conducted.

The final third of the course takes a closer look at the microeconomic foundations of macroeconomics. We look in greater detail at consumption, saving, investment, the national debt, the trade balance, and monetary institutions.

Schedule of topics and readings:

1. **Introduction:**

2. **The Economy in the Long Run:**
   Sept 1,4: Static Equilibrium (Ch 3, skip 3.2; Handout on Excel)
   Sept 6,8: Money and Inflation (Ch 4)
   Sept 11,13: Open Economy (Ch 5)
   Sept 15,18: Growth (Ch 7,8, include appendix)
   Sept 27: Take home portion of MIDTERM EXAM due in class.
   MIDTERM EXAM: Friday, September 29 in class.
   FALL BREAK

3. **The Economy in the Short Run:**
   Oct 4: The Business Cycle and Stabilization Policy (Ch 9)
   Oct 6,9,11,13: IS-LM (Ch 10)
   Oct 16,18: Using IS-LM (Ch 11, include appendix)
   Oct 25,27: Aggregate Supply (Ch 13.2)
   Oct 30, Nov 1,3: Federal Reserve Policy in the early 1980s (Greider, Ch 1–6)
   Nov 6: take home portion of MIDTERM EXAM due in class; No readings
   MIDTERM EXAM: Wednesday, November 8 in class.
   Nov 10,13: Macroeconomic Policy Debates (Ch 13.2, Ch 14, 19; Mankiw, “U.S. Monetary Policy During the 1990s”)

4. **Microeconomic Foundations of Macroeconomics:**
   Nov 15,17: Government Debt (Ch 15)
   Nov 20,27: Consumption and Saving (Ch 16)
   THANKSGIVING BREAK
   Nov 29, Dec 1: Investment (Ch 17)
   Dec 3,6: Money (Ch 18)

5. **Conclusion**
   Dec 8: Conclusion (Epilogue)
   FINAL EXAM (cumulative): Friday, Dec 15, 7:00 pm.
News presentations:

You will each give at least one brief presentation at the beginning of a class with another student. The topic should be a recent news item related to macroeconomics or some other information relevant to the course. You should divide up the presentation so that each of you speaks for a few minutes on the topic (please keep the total presentation time to no more than 5 minutes). After the presentation, you will have a few minutes to field questions from the rest of the class or raise your own questions.

You must email the rest of the class (using the email list in Blackboard) with a condensed description of your topic and your sources (e.g., URLs) no later than 7:00 PM the evening before your presentation. In your email you can also raise a few questions for the class to think about prior to the presentation. All students in the class are expected to have read the materials that you have sent by class time.

You should use several sources for your information. For example, if you find an interesting topic in a news article from the New York Times, look for a statement from a relevant government agency or think tank that will answer questions that you had about the coverage in the Times.

Many news sources are available directly on-line, others are available in hard copy in the library (e.g., The Economist) or the Levitt Center (e.g., Financial Times), and many are archived (full text) in Lexis-Nexis which is available through the library web page. The Wall Street Journal is linked electronically through ALEX. Links to a variety of government organizations, think tanks, etc., are provided on our department web resource page http://www.hamilton.edu/academics/econ/Links.html. You might check out, for example, the weekly Economic Letter from the FRB of San Francisco or the cover articles in the Monthly Economic Trends publication from the FRB of St. Louis. If you want to look at charts of recent data, try Economagic, or go to the agency that publishes the data that you are interested in (e.g., the Bureau of Labor Statistics for unemployment or the CPI), or the Economic Trends publications noted above.
